

BLACK SOLDIER FLY DRIED LARVAE

The larvae, prior to being oven-baked (usually 2-3 weeks from hatching to the required size), are fed on only EU-certified waste (pre-consumer and plant based) with a mix of roughly: 70% fruit & vegetable waste and 30% cereal by-products (spent grain and yeast).

Technical data: 100% whole or grinded Black Soldier Fly dried Larvae (*Hermetia illucens*). The larvae grow in a fully controlled environment using an optimised and safe feedstock mixture sourced from clean, traceable streams of pre-consumer fruits, vegetables and grains in strict compliance with all EU regulations (EC 1069/2009 and EC 142/2011) and production standards.

Appearance: dark brown, each piece is around 10x4mm.

Typical Analysis:

Crude Protein 39.4%

Crude Fat 30.4%

Crude Fibre 5.7%

Moisture 9.6%

Ash 4.9%

Minerals:

Calcium 0.61%

Phosphorus 0.61%

Amino acids:

Methionine 0.73%

Lysine 2.24%

Arginine 1.97%

Fatty acids:

Saturated fatty acids 70.3%

Monounsaturated fatty acids 14.5%

Polyunsaturated fatty acids 14.9%

Storage:

Store at ambient temperature, preferably below 25°C out of direct sunlight, away from moisture.

Shelf life:

12 months from the date of production if stored as recommended.

The above information is provided by the BSF farm producing this product.
